

3 new iPad holders from König & Meyer

Before the musikmesse and proligh+sound 2011 begins in Frankfurt, we would like to present to you today our **first new products**.

The iPad is becoming firmly established in the music business!

In addition to digitalizing sheet music or lyrics, the iPad offers plenty of options, especially for recording. It features many different apps used by musicians ranging from instruments and tuners for synthesizers and harmonizers to multi-effect processors right up to a complete recording studio.

To make the iPad easier to handle, König & Meyer has developed various iPad holders for these special music applications.

Because the iPad stand holder (No. 19710) can be screwed onto any 3/8" thread, it can be attached, for example, to all microphone stands.

Using the special feature of the iPad holder (No. 19720), a clamp mounting, to fasten it to the tube, in any size from 7 to 30 mm in diameter.

The third version is the iPad wall holder (No. 19730), which makes it possible to mount and use the device without a stand. The holder can be attached to a wall by means of three mounting holes.

The iPad can be inserted very simply into anyone of the three black holders and switched easily from portrait to landscape position depending on the application in all the versions. Infinitely variable adjustment allowing tilting at any angle enables you to align the iPad stand holder and the iPad holder in any desired position.

All the holders feature the proven König & Meyer material quality and workmanship - made in Germany.
