Type	black
Adjustment	clamping lever for quick adjustment
Special features	extremely lightweight; adjustable end cap to stabilize the stand on uneven surfaces
Instrument support	non-marring slip-proof pad
Price display	
Material	aluminum
Shape	double-braced x-stand
Quality level	
Support width	from 327 to 789 mm

This X-stand made of aluminum is lightweight and yet extremely stable. The arrangement of the double-braced stand tubes provides noticeably more stability and safety. The ergonomic clamping lever allows a quick and easy mounting or folding in no time at all. The sturdy metal joint is finely interlocked and adjustable in 5° steps enabling several different positions. With the help of a scale you can quickly find your preferred position again. The two rear rubber end caps can be moved axially and can therefore be perfectly adapted to the width of the keyboard. The maximum support depth is 350 mm. The typical quality features of K&M such as solid workmanship, high-quality finish and an adjustable rubber end cap for uneven floors complete the overall concept. The attachment 18941 offers the possibility to extend the stand for a second keyboard.
