Guitar Stand »Heli 2« from König & Meyer

The new version of the popular K&M guitar stand »Heli« presents itself in a completely revised and modern design with many innovative features.

A structure integrated in the rubbering provides padded supports and protects the instrument.

The stand can be folded or set up even faster thanks to a newly developed folding mechanism. In addition the width of the »Heli 2« is now easier to adjust. Like its predecessor, the stand has a very low dead weight and is very compact and flat when folded.

A practical lock keeps the »Heli 2« in transport position. An additional feature includes the two integrated pick holders.

The guitar stand is available in several colors (black, blue, red, and cork).
