| **Suitable for** | bottles, glasses and cups with maximum diameter of 3.74" |
| **Type** | black |
| **Weight** | 0.13 kg |

With the 16027 drink holder, König & Meyer is launching a product whose body is made entirely of bio-based plastic. These plastics contain a more than 50% up to 100% share of renewable plant-based raw materials. The use of renewable raw materials helps to conserve limited oil reserves and reduce harmful CO2 emissions. More information on bio-based plastics at: bioplastic.k-m.de. The 16027 drink holder made of bio-based plastic for glasses, cups and mugs is just as up to daily use as a holder made of conventional plastic. The metal clamp fits all standard stands with a tube diameter of 0.433 to 1.181".
