| Visibility    |                                                          |
| Type          | black                                                    |
| Price display |                                                          |
| Screw-on to   | tube diameter 1.181"                                     |
| Material      | Bio-based plastic                                        |

With the 16027 drink holder, König & Meyer is launching a product whose body is made entirely of bio-based plastic. These plastics contain a more than 50% up to 100% share of renewable plant-based raw materials. The use of renewable raw materials helps to conserve limited oil reserves and reduce harmful CO2 emissions. More information on bio-based plastics at: [bioplastic.k-m.de](http://bioplastic.k-m.de). The 16027 drink holder made of bio-based plastic for glasses, cups and mugs is just as up to daily use as a holder made of conventional plastic. The metal clamp fits all standard stands with a tube diameter of 0.433 to 1.181".
