| Diameter            | 1.06"                         |

The extremely practical Quick-Release adapter facilitates the quick and easy change of microphones or other accessories on stage or in the studio. Simple handling: by pressing the grey button, the threaded bolt is unlocked and can already be removed. Thanks to the anti-twist hexagonal connection, the adapter is also ideally suited for use on microphone fishing poles. Included in the delivery are two threaded bolts. The body of the adapter is made of high-quality aluminum, which makes it very lightweight yet robust. The support for the threaded bolt is made of impact-resistant and low noise plastic.
