

26750

## Speaker stand

### Product variant

26750-022-55 - black

### Technical Data

|                     |                                                                                                 |
|---------------------|-------------------------------------------------------------------------------------------------|
| Leg construction    | round cast-iron base                                                                            |
| Visibility          |                                                                                                 |
| Special features    | mounting aid included;<br>speaker will be fixed with flange adapter                             |
| Height              | from 36.61 to 56.30"                                                                            |
| Rod combination     | 2-piece folding design                                                                          |
| Type                | black                                                                                           |
| Base diameter       | 17.72"                                                                                          |
| Height adjustment   | locking screw and safety hook                                                                   |
| *                   | With centric loading, on a horizontal surface<br>and without lateral forces (wind, shocks etc.) |
| Max. load capacity* | 77.162 lbs                                                                                      |
| Price display       |                                                                                                 |
| Quality level       |                                                                                                 |
| Material            | steel                                                                                           |
| Tube end(s)         | diameter 1.378"                                                                                 |

Space-saving speaker stand with a large, flat cast-iron base (ø 17.716"). The solid steel construction impresses with its stability and supports speakers weighing up to 77.093 lbs when the load is centred. For optimal sound reinforcement height, 3.937" steps can be set between 36.614 and 56.299". The slim clamp with safety hook is easy and comfortable to use. The end tube has a diameter of 1.378" and is therefore suitable for all corresponding flange bushings. The range of applications can be extended with a variety of accessories such as a projector tray (26747), mounting adapter (19580), etc.
